I like the design of this site:

https://www.gtheimagineers.com/en.html

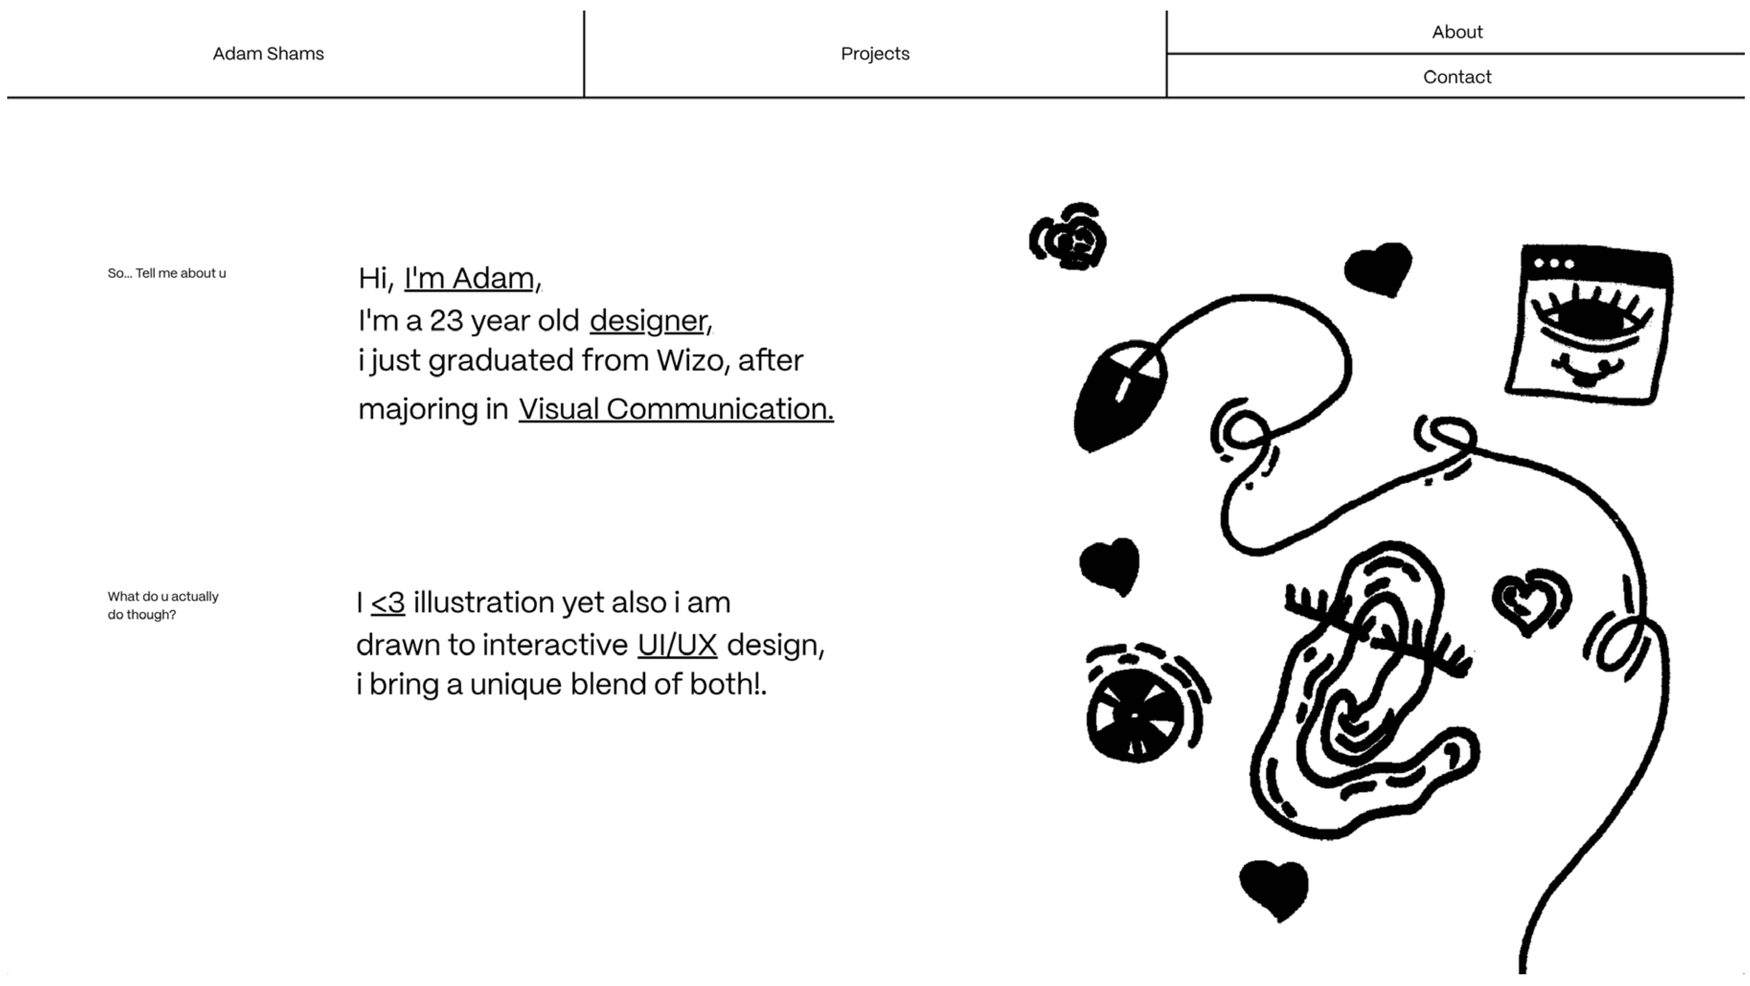

specifically the "vision" page, screenshot attached below.

There is a set of circles that bounce horizontally back and forth creating an interesting imagery. this design features approximately 23 concentric circles wherein, 15 of the circles have center points that seem to shift along a horizontal line, and then an inner (approx) 8 circles that seem to becentered around points tracing back along that same line. The circles never cross/intersect and the linked site seems to show those centerpoints simply bouncing back and forth from right to left etc.

Though I like the gtheimagineers.com site linked above, I do not love the horizontal sliding menu element. I want to create a top line menu that is built using simple white lines on black background / perhaps with a white background with black lines ass an alternavtive "light"mode, as seen in the site linked here, and shown below in the screenshot:

https://www.adamshams.com/

I am also linking other sites that are of interest, primarily because of their interactive elements:

https://jasonwebb.github.io/reaction-diffusion-playground/app.html

I want to make sure that the bobrannen.com site is a creative place where I can post design and creativity-related applets and concepts that do not fit into the Danilarious.art Brand aesthetic.
